## *Encyclopedia of American Industries*

“Volume 1 covers 459 manufacturing industries, and volume 2 includes 545 essays in categories such as ‘Retail Trade’ and ‘Finance, Insurance, and Real Estate.’ Arranged numerically by SIC codes, each entry also includes the corresponding North American Industry Classification System (NAICS) codes... Both print and online sources are cited, and resources are often very current. Conversion tables allow cross-references between SIC and NAICS industry codes. These tables are especially helpful as the SIC code is industry oriented, while the NAICS is production oriented. Additionally, each volume includes an extensive general index to both volumes. This edition’s completely revised essays, with updated statistics and current information on industry trends and developments presented in a highly readable fashion, will continue to be a business reference classic.”

- *Booklist*

“The essays are clearly written and use relevant industry and government sources, but the further reading sources for some essays are older than those for others. ... The new edition is still a useful addition to any library with a significant business collection.”

- *ARBA*

“Compiled by experienced editors, this unique set is well structured to save valuable research time... Recommended for larger academic and business libraries with specialized collections.”
